APPLIED MATHEMATICS AND COMPUTATION

VOLUME 56

EUGENE YEE
Application of the Decomposition Method to the Solution of the Reaction-Convection-Diffusion Equation 1

K. J. BUNCH AND R. W. GROW
A Compact Cubic Spline Algorithm for Converging to Function Minimums 29

C. CROMBEZ
Weak and Norm Convergence of a Parallel Projection Method in Hilbert Spaces 35

FERENC SZIDAROVSZKY AND JEROME YEN
On the Controllability of Discrete Dynamic Oligopolies under Adaptive Expectations 49

ZHANG PENG
An Inverse Problem in Nonlinear Optics 59

I. P. BOGLAEV AND V. V. SIROTKIN
Computational Method for a Singular Perturbation Problem via Domain Decomposition and its Parallel Implementation 71

A. SENGUPTA
A Note on a Reduction of Cauchy Singular Integral Equation to Fredholm Equation in L_p 97

PIERPAOLO OMARI AND MAURIZIO TROMBETTA
Erratum: Remarks on the Lower and Upper Solutions Method for Second- and Third-Order Boundary Value Problems 101

MICHAEL CONRAD
Biophysicalism 103

H. H. PATTEE
The Limitations of Formal Models of Measurement, Control, and Cognition 111

WERNER EBELING
Chaos, Order, and Information in the Evolution of Strings 131

R. K. MISHRA AND G. K. SEN
Toward a Theory of Living State—Part I 153

R. K. MISHRA AND SATISH KUMAR
Toward a Theory of Living State—Part II 167

H. SHIMIZU
Biological Autonomy: The Self-Creation of Constraints 177

MICHAEL CONRAD
The Fluctuon Model of Force, Life, and Computation: A Constructive Analysis 203

KOICHIRO MATSUNO
Being Free from Ceteris Paribus: A Vehicle for Founding Physics on Biology Rather than the Other Way Around 261

OTTO E. ROSSLER AND JONAS O. ROSSLER
The Endo Approach 281

PAUL J. WERBOS
Chaotic Solitons and the Foundations of Physics: A Potential Revolution 289

DEBORAH CONRAD
Rules, Laws, and Reductionism 341

ROBERT ROSEN
On Models and Modeling 359

VOLUME CONTENTS
